The invention relates to AgrD derived peptides, a composition containing a peptide and a carrier, and a method for the production of the cyclic peptides. The peptide inhibits the agr response, which is normally associated with the release of virulence factors of Staphylococcus aureus. An AgrD peptide is produced by S. aureus that activates the agr response in strains of a single group, but interferes with this response in strains of different groups. The peptides and composition containing them can be used to treat infections by S. aureus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               WPI;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Staphylococcus

The invention relates to AgrD derived cyclic peptides, a composition containing a peptide and a carrier, and a method for the production of the cyclic peptides. The peptide inhibits the agr response, which is normally associated with the release of virulence factors of Staphylococcus aureus. An AgrD peptide is produced by S. aureus that activates the agr response in strains of a single group, but interferes with this response in strains of different groups. The peptides and composition containing them can be used to treat infections by S. aureus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               WPI;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           CC AgrD is a secreted agr-encoded peptide and where the agr locus CC controls the synthesis of virulence factor and other extracellular proteins responsible for pathogenicity in S. aureus. Preferred CC cyclic bond between the Sequence NH2-X(n)-Z-X(y)-COOH, with a CC cyclic bond between the Z residue and COOH other than a thioester CC bond, where X is an amino acid, an amino acid analogue, a peptidomimetic or non-amide isostere, Z is a synthetic or a cc peptidomimetic or non-amide sostere, Z is a synthetic or a cc peptidomimetic amino acid, n is 0-10 and y is 1-10. The cyclic bond CC is especially a lactam or lactone bond. The thiololactone cc structure within native AgrD peptides is required for activation CC of the agr response. Elimination of the thiol ester component of the cyclic ring structure can destroy agr response activating a ccivity while preserving and enhancing inhibitory activity. A CC claimed method of preparing a cyclic peptide in control phase resin support; CC deprotecting the resulting protected assembled peptide; treating the CC deprotected peptide with neutral buffer for a time sufficient to CC control the cyclic peptide and cleave the peptide is useful for bacterial interference, especially for the treatment of S. aureus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Query Match

The present sequence is that of a protected peptide used in an acceptance of the preparation of novel synthetic cyclic peptides of the invention (see AAM50899-906). The peptide corresponds to the Staphylococcus aureus AgrDII sequence with a Cys5 to diaminopropionic carid (Dpr) mutation (lactam). It was synthesised on a Wang-resin cusing an Fmoc N-alpha protection strategy. Following chain assembly, the peptide was cleaved from the support and the Dpr-5 residue deprotected by treatment with a trifluoroacetic acidianisole:water carboxylates were then dissolved in DMF and treated with PyBOP. Cyclization was complete after 2 hr. The remaining protecting groups cover removed by treatment with HF and the peptide purified by HBLC. CR The cyclic peptide is capable of inhibiting the agr response of Staphylococcus aureus. The thiolactone structure within native AgrD peptides is required for activation of this response. Replacement of the thiol ester component of the cyclic ring cstructure with a lactam (as in the present case) or a lactone can can destructure with a lactam (as in the present case) or a lactone can confidency activity. The cyclic peptides are useful for charterial interference, especially for the treatment of S. aureus

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Skurnik M. Batsford S., Mertz A.K.H., Schiltz E., Toivanen P. Skurnik M. Batsford S., Mertz A.K.H., Schiltz E., Toivanen P. Withe putative arthritogenic cationic 19-kilodalton antigen of Yersinia enterocolitica is a urease beta-subunit."; Infect. Immun. 61.2498-2504(1993).

-i- CARALYTIC ACTIVITY: Urea + H(2)0 = CO(2) + 2 NH(3).

-i- COPACTOR: Binds 2 nikkel ions per subunit (By similarity).

-i- SUBUNIT: (ALPHA, BETA, GAMMA)(3) (BY SIMILARITY).

-i- PTM: Lys-221 is carbamylatted. The carbamoyl group provides ligands for the two nickel ions (By similarity).

-i- SIMILARITY: BELONGS TO THE UREASE FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 between the Swiss Institute of Bloinformatics and the E the European Bioinformatics Institute.
